## DETAILED ACTION

### *Claim Objections*

1. **Claim 14** is objected to because of the following informalities: line 1 has “claim 13” it should be “claim 12” since claim 13 is cancelled. Correction is required.

### *Double Patenting*

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

**Claims 1 and 12** are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1 and 14 of copending Application No. 10/412,179. Although the conflicting claims are not identical, they are not patentably distinct from each other because a network access device having at least a powered state and a power-off state, the powered state allowing the

network access device to receive messages over a communication channel, the power-off state not allowing the network access device to receive messages over the communication channel, the network access device determines whether wireless coverage exists for the network access device and provides an indication of an out-of-coverage condition if the network access device is out of wireless coverage and controller that determines time periods for the network access device to be in the powered state, the time periods based on a discontinuous reception parameter obtained from the network access device, the controller also receiving the indication of the out-of-coverage condition and switching the network access device to the power-off state if there is an out-of-coverage condition for the network access device.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

**Claims 2-6, 8-11, 14, 15, 17 and 18** are rejected for being dependent of rejected claims above.

### ***Response to Arguments***

3. Applicant's arguments with respect to **claims 1-6, 8-12, 14, 15, 17 and 18** have been considered but are moot in view of the new ground(s) of rejection.
